## Professional Experience

### Software Engineer, *Holistic AI*

Sep 2022 – present | London, UK

- Led the (front-end) development of several applications from inception, including a platform for large language model (LLM) auditing and monitoring, and a system to audit Automated Environmental Decision Tools (AEDT) for NYC Local Law 144.
- Refactored and improved existing projects, modularizing and simplifying the code to improve readability and maintainability.
- Contributed to multiple existing back-end projects, primarily using TypeScript, with additional experience in Java and Python.

### Software Engineer, *Clim8*

Dec 2021 – Jul 2022 | London, UK

- Delivered a wide range of Android and iOS app features including charting historical performance data, ISA transfer functionality, Junior ISA accounts (risk/suitability assessment, product explanation, etc.), and a fairly complex account closure flow.
- Mostly focused on using React Native and TypeScript to create new features, tested with Jest and React Native Testing Library.

### Junior Full Stack Developer, *\_nology*

Jan 2021 – Nov 2021 | London, UK

- Completed a 12-week boot camp to learn web development technologies
- Seconded to Sugar (add-sugar.io) for 6 months as a Junior Developer where I built their internal credit management portal using React, Typescript, and Python, using AWS Lambda functions.

### Product Manager, *Pass the Keys*

Jan 2019 – Jan 2021 | London, UK

- Introduced Agile methodologies to shorten the release cycle for dev team
- Led Engineering team with ROI exceeding 150% within a year on multiple features including Pricing optimization algorithms, Pricing adjustment tools, Professional Photography upload tools
- Taught myself SQL and Python for data analysis to ensure that product decisions could be data-backed

### Product Manager, *Big Sofa Technologies*

Aug 2016 – Dec 2018 | London, UK

- Initiated and scoped breakdown of monolith app into microservices to increase maintainability and speed up future development
- Led two dedicated teams with competing deadlines to deliver on time and within budget

## Summary

I'm a London-based software engineer with a background in product management and a passion for creating and delivering user-centric products. I feel most confident coding in TypeScript but I also have experience in Python and Java. I have dabbled in C, Lua, and Ruby in side projects.

I'm motivated by big goals and clear missions. I do my best work in fast-paced environments where I can take on interesting challenges, make a quick impact, and keep growing.

## Skills

Typescript • React •  
React Native • Agile •  
Product Leadership • HTML •  
CSS • Python • Data Analysis •  
SQL • Node

## Education

**University of British Columbia,**  
*BA - Political Science & Philosophy*

2008 – 2012 | Vancouver, Canada

## Languages

English • French

## Interests

Skiing • Reading • Films • Music
